

RECTANGULAR FILTER BEDS

These Filter Beds have a distributor moving back and forth along the bed which has points requiring grease lubrication.

In some cases there may only be lubrication points on the wheels but there may also be several points on the distributor reversing mechanism and pivots etc.

In addition there may be grease lubrication points on the drive and rope pulleys depending on the design of the filter bed.

SOLUTION

Single Point 125cc gas-powered automatic lubricators can be installed to cover most of the applications.

Where longer feed lines are required the higher-pressure MD125 Ultimate Lubricator can be used to overcome back pressure and ensure reliable operation of the lubricator.

125cc Mini-Lubers fitted to distributor wheel bearings

ATS ELECTRO-LUBE (UK) LTD HAVE CONSIDERABLE EXPERIENCE WITH WATER INDUSTRY APPLICATIONS AND CAN OFFER FULL SITE SURVEYS AND QUOTATIONS INCLUDING INSTALLATION IF REQUIRED
